

Part of the Super SEE ZONE® family of Anti-marking Systems

The highly automated, high-speed printing presses and fast turnaround demands of the printing industry, require products that minimize down-time and provide reliable, efficient solutions.

The E-ZONE® Anti-Marking System is an easy to use ZONE identification system consisting of specially coated Super See™ anti-marking film enhanced with a printed ZONE system that is mounted on a transfer cylinder.

The pressman is able to “ZONE” in on the specific area where marking is occurring and quickly communicate to his helper where to clean the transfer jacket.

This allows the pressman to continue with production related tasks and get his press back on the counter as quickly as possible.

- Similarly priced to a BLUE GLASS® sheet with the Advantage of our ZONE cleaning method
- For use on solid cylinder surfaces, such as Komori, Mitsubishi & Ryobi presses
- Available in custom sized sheets, full rolls & partial rolls

- Less cleaning = Longer life
- Less time cleaning = Higher profit margin
